Wraïne Flores - Project Portfolio Page (PPP)

Overview

HALPMI is a Command Line Interface (CLI) Application that allows administrators in clinics to manage the clinic's day-to-day administrative tasks. More specifically, using HALPMI the user is able to insert new information regarding Doctors, Patients and Medication. Users can also schedule appointment for Patients with Doctors and keep track of medication stocks.

Summary of Contributions

Code contributed & Enhancement implemented: [RepoSense link](#)

Contributions & Enhancements	Description
Created Person	This class is used to base Doctor & Person Classes
Find Doctor	Feature finds a doctor based on a specific parameter
Find Patient	Feature finds a patient based on a specific parameter
Find Medicine	Feature finds a medicine based on a specific parameter
Help Function	Compiled all help messages to be printed out

UG contributions:

- Edited contents in the UG for continuity purposes to see an overall picture
- Tests examples in the UG to ensure its validity

- Checked every section in UG to know that everything is in order

DG contributions:

- Helped explain the Manager class and made its diagram
- Helped explain the Command classes and made its diagram

Team-based tasks contributions:

- Helped to set up the milestones and labels on Github issues when necessary
- Helped maintain issue trackers for our Github
- Updating user/developer docs that are not specific to a feature and see a change fits it
- Regularly code reviews teammates' codes for merging into our master
- Before the final release for v2.1, I have checked that all functions work as indicated in our guides
